

# Wildlife Monitoring

*“What is man without the beasts? If all the beasts were gone, man would die from a great loneliness of the spirit. For what happens to the beast, soon happens to man”  
~Chief Seattle*

## Wildlife Monitoring Program

Do you like to be where the wild things are? Are you interested in local wildlife populations? Put your identification skills to the test. Volunteers will collect data on a variety of different populations including birds, amphibians, salmon, turtles and aquatic insects.

## Avian Wader Orientation

**Saturday, October 10, 2009**

**Clark Public Utilities—Orchards**

**8600 NE 117th Ave**

**9:00 a.m.-12 p.m.**

Are you looking to take your birding to another level?

Attend this orientation to learn how to collect data on avian wader populations in Clark County.

Volunteers make their own monitoring schedule within set protocols.

Bring binoculars and weather appropriate gear (i.e. boots, jacket, hats) for the field portion.

This wildlife monitoring effort is a partnership between Clark Public Utilities' StreamTeam and Clark County Community Development with strong support from the Vancouver Audubon Society. The goal of this program is to monitor wildlife usage of restoration and enhancement sites.
